

ADVANCED WIRELESS MOUSE

Nst. p-25
4/3/10

CHERRY has introduced an innovative MW 8 Advanced wireless mouse that was specially constructed to conform to the highest standards of even the most discerning user, bringing together timeless design alongside state-of-the-art technology. On the outside, the elegant metal surface is made of brushed aluminum, while the rubber pads contain the Voronoi cell structure located on both sides of the mouse so that you will always have a good grip.

The mouse wheel has been made to be extra durable so that it can last far longer than usual. With optical scanning and a magnetic lock for the USB receiver, you can be sure that it won't get lost during transportation as it remains securely attached to the MW 8 Advanced.

It also comes with a transport bag. Relying on the high-precision PixArt "track-on-glass" laser navigation sensor with optical scanning, the MW 8 Advance is capable of working on virtually any surface, glass included, without the need for a mouse pad. It has on-the-fly resolution adjustment between 600, 1,000, 1,600, and 3200 DPI, guaranteeing that it will play nice with 4K monitors without missing a beat. If you want a solid, workman-like mouse that lasts for years, then the US\$50 asking price is well worth every cent. www.cherryamericas.com
